Slides
Tapes
Video tapes

INSTRUCTIONAL SERVICES

The primary purpose of the undergraduate program in Educational and Communication Media is to provide accredited courses for provisional and special certification for Ohio school educational media personnel. The program will also provide a basic introduction to library science for students interested in other types of libraries and information centers; and provide basic broadcasting, film, library science, and media courses for undergraduates in all major fields. The undergraduate program presents a curriculum which blends an understanding of the principles and techniques of both librarianship and audio-visual education.

The new academic program in Library and Communication Science leading to the Master of Science degree will be offered by a new Department of Library and Communication Science within the Library Resources Center. The purpose of this multidisciplinary and innovative program is to provide students with a broad background in the nature and communication of information in our changing society and comprehensive knowledge of some aspect of the production, transmission, or storage of information, especially in the educational setting. The program will offer professional education for librarians, media specialists, educational broadcasting personnel, and information specialists.
